

LED bulbs

The LED lighting is the most economical light source, it does not contain harmful gases, it is not fragile, withstands hits and vibration, does not have annoying light oscillations and has the longest life – more than 5000 hours.

General characteristics

- Nominal voltage: 220-240V;
- Working frequency: 50-60Hz;
- Light temperature: 4500 K;
- Light color according to EN 12464-1: neutral white;
 - Start time: 0s;
 - Bulb life: 50000 h;

LED bulb LED 9W

- Nominal power: 9W;
- Claimed equivalent power of an incandescent light bulb: 75W;
- Luminous flux: 1000 lm;
- Base: E27

LED bulb LED 5W

- Nominal power: 5W;
- Claimed equivalent power of an incandescent light bulb: 40W;
- Luminous flux: 400 lm;
- Base: E27

LED bulb LED 3.5W

- Nominal power: 3.5W;
- Claimed equivalent power of an incandescent light bulb: 25W;
- Luminous flux: 300 lm;
- Base: E14/E27
